

EMR Bulletin #7

EMR System Upgrade

Friday, 3 July 2020

The new version of the Electronic Medical Record (EMR) is here! Please ensure you make yourself familiar with the important updates below.

VTE Care Pathway in EMR

The EMR Venous Thromboembolism (VTE) Care Pathway is available again in the system! The VTE Care Pathway provides a gold-standard of care for patients.

The changes you will notice in the EMR are:

- Active VTE Care Pathways will be 'Completed' automatically on discharge
- Flowcharts from the PROMPT guideline can be viewed directly in the care pathway
- A general improvement to the look and feel of the pathway.

[Please refer to the QRG for further information](#)

The new EMR version paves the way for even further improvements to our VTE Care Pathway.

Custom Patient Lists - reminder

Please check that all custom patient lists are present and notify the EMR Helpdesk immediately if there are any issues.

Detailed information is available in the [EMR System Upgrade Release Notes](#). If you have a 'how-to' question, please refer to the [updated QRGs on the EMR website](#) or ask a teammate or EMR Champion.

Please note: All managers are requested to share these updates with their teams and discuss at stand-ups and handover.
